

# FIT FOR THE FUTURE: AUSTRALIAN NURSES' HEALTH STATUS AND HEALTH BEHAVIOURS

Lin Perry, Christine Duffield,  
Robyn Gallagher, David Sibbritt  
and partner NSWNMA

# WHO CARES FOR THE CARERS?

# WHAT WE KNOW ABOUT NURSES' HEALTH

- Lots about nurses as a female population group (US Nurses Health Study)
- Some studies of student nurses
- Quite a lot about nurses' job stress, burn-out and coping
- A scatter of single-site topic studies e.g. smoking
- The Nurses and Midwives e-Cohort study
- **As the single biggest healthcare workforce – pitifully little**

# NURSING & NURSES' HEALTH:

## **Nursing advantage:**

- Working age/  
>93% employed AIHW 2013
- Predominantly female
- Largely graduate
- Socio-economic advantage
- High health literacy

## **Occupational risk factors:**

- Ageing profiles
- Shift work
- 'Stress' → → dysfunctional coping
- Manual / desk work
- Occupational exposures & physical injuries

# OUR OBJECTIVES

1. Conduct the first representative survey to:
  - a) Determine the health of the workforce and prevalence of modifiable risk factors
  - b) Identify factors motivating and driving choices of health-related behaviours.
2. **Consult** to identify research, policy & practices to safeguard the future capability of the workforce and optimise their capacity to deliver care.

# CONSTRUCT AND DELIVER AN<sup>7</sup> ELECTRONIC SURVEY

Used established questionnaires where we could:

- Australian Longitudinal Study on Women's Health
- Nurses and Midwives e-Cohort Study
- Australian Health Survey / Australian Census
- Impact of Adding Nursing Support workers to Patient, Nurse and System outcomes Survey

Used established tools where available:

- SF 12
- Insomnia Severity Index ... and others

Our pilot study in 2 Sydney hospitals

# WE ASKED QUESTIONS ABOUT -

- **Demographic characteristics**  
age, gender, highest educational qualification, ethnicity, carer commitments
- **Workforce characteristics**  
work role, work setting, workplace location, work contract, hours worked per week, shifts worked, workplace injuries and abuse
- **General health and well-being**  
perceived general health, presence of disease and symptoms: continence, pain and sleep, medications, hospital admissions and sick days etc.

# WE ASKED QUESTIONS ABOUT -

- **Health behaviours**  
diet, exercise, weight/ BMI, smoking, alcohol  
(routine health screening uptake)
- **Intention to leave** their job within 6 / 12  
months
- **(Job satisfaction**
- **Quality of life – reports to follow)**

# RESPONSES

- 5,446 surveys submitted
- 385 (7%) excluded due to missing data  
20 not practicing in NSW
- Final sample **5,041 respondents**
- Approx 88,319 RNs and ENs & 9,524 midwives eligible
- NSWNMA  $\approx$  63,000
- Representative of NSW workforce?

# REPRESENTATIVE OF NSW N & M WORKFORCE?

	<b>Respondents:</b>	<b>NSW registrants</b>
Mean age	48.0 yrs	44.6 yrs
Female	88.5%	89.8%
Hospital-based	59.7%	62.6%
Metro	65.8%	68.4%

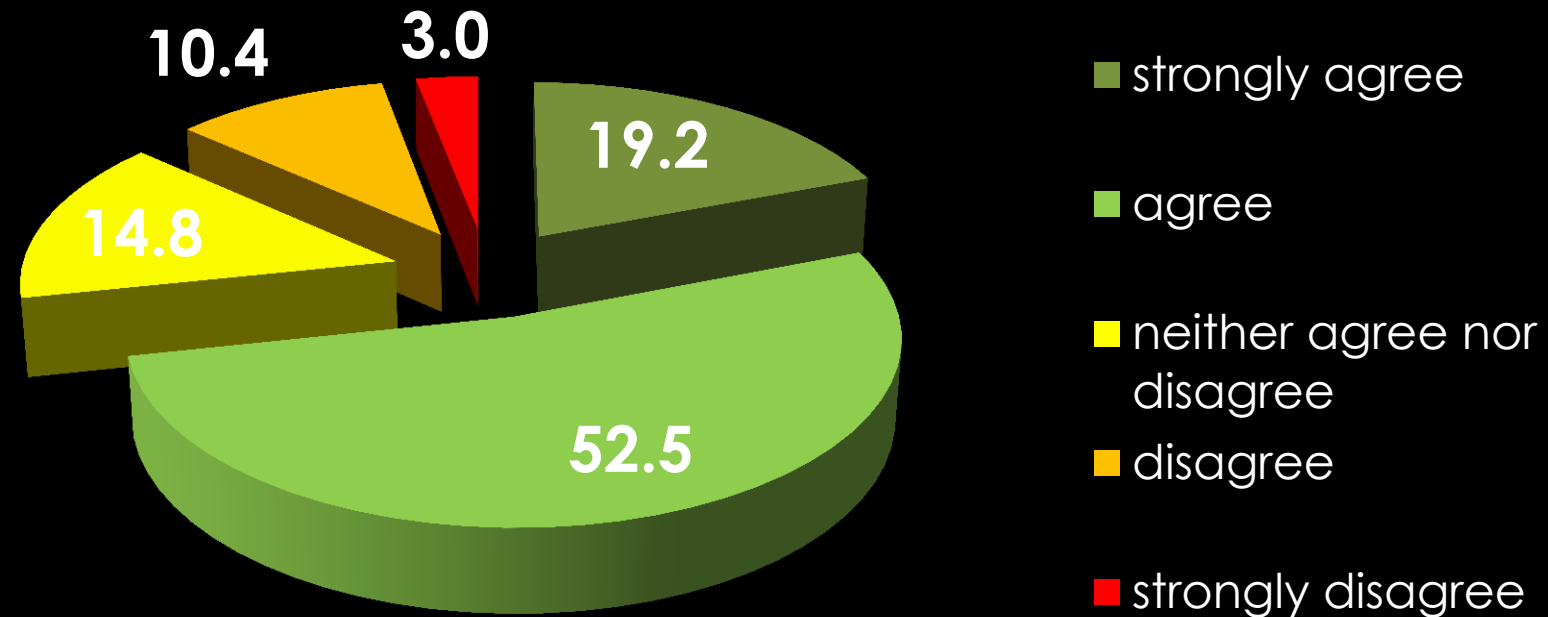

# Work characteristics

# WORK PATTERNS

- Current work contract:
  - Full time** 53.6%
  - Part time 38.7%
  - Casual/pool/agency/other 7.1%
- Av hours worked/week 34.3 (+/-9.8)
- Work 40 hrs/wk or more 39.2%
- **Shift worker** (not days only) 53.1%
- Av years in RN/RM/EN role 21.5 (+/-12.8)

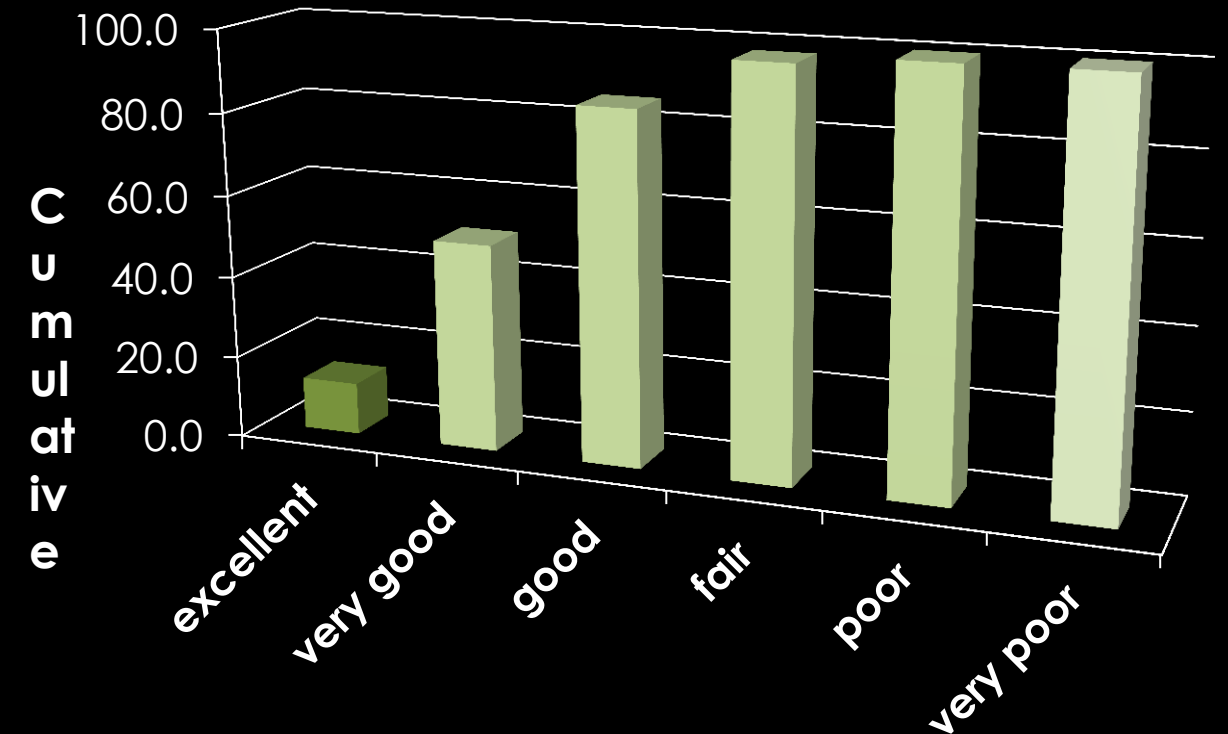

**“Overall, I am satisfied with my current job”**

■ excellent  
■ good

■ very good  
■ fair

**'In general, would you say  
your health is –'**

# HEALTH RECORD

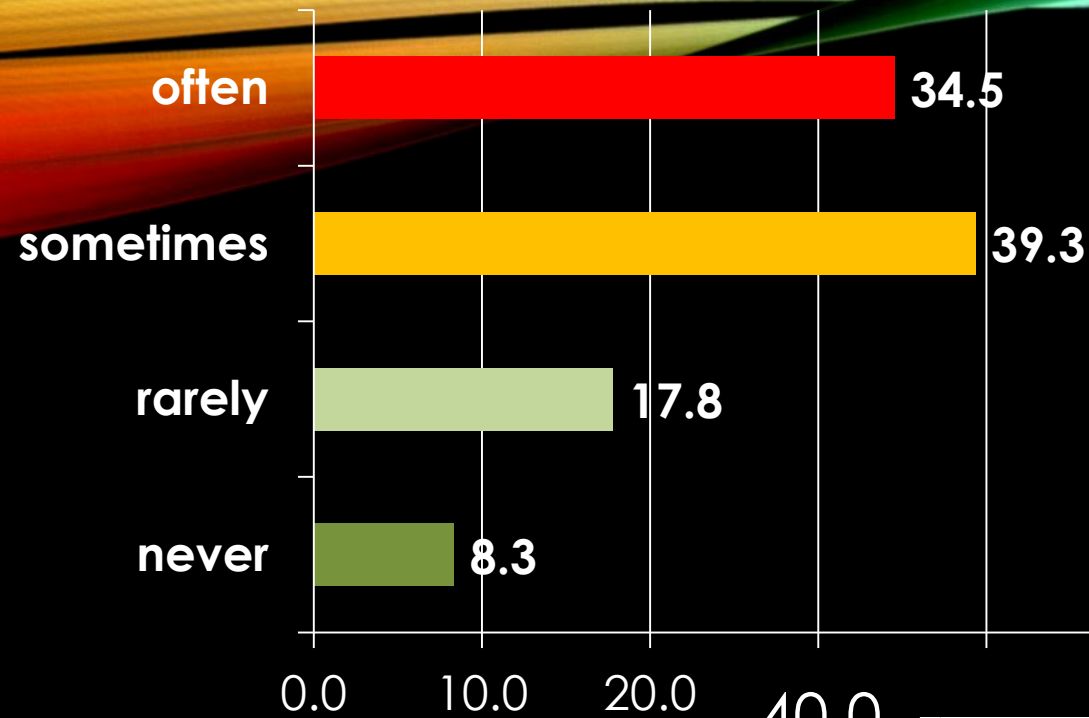

• Av number of sick days	5.5 +/- 12.7
• Av number 'mental health' days	1.7 +/- 7.2
• Had hospital admission	16.8%
• <b>Reports at least 1 chronic disease</b>	<b>64.9%</b>
mood disorders	26.1%
bone & joint	19.4%
cardiovascular	19.0%
respiratory	18.8%
diabetes	8.3%

# SYMPTOMS

## 'SOMETIMES OR MORE OFTEN' IN THE LAST 12 MONTHS

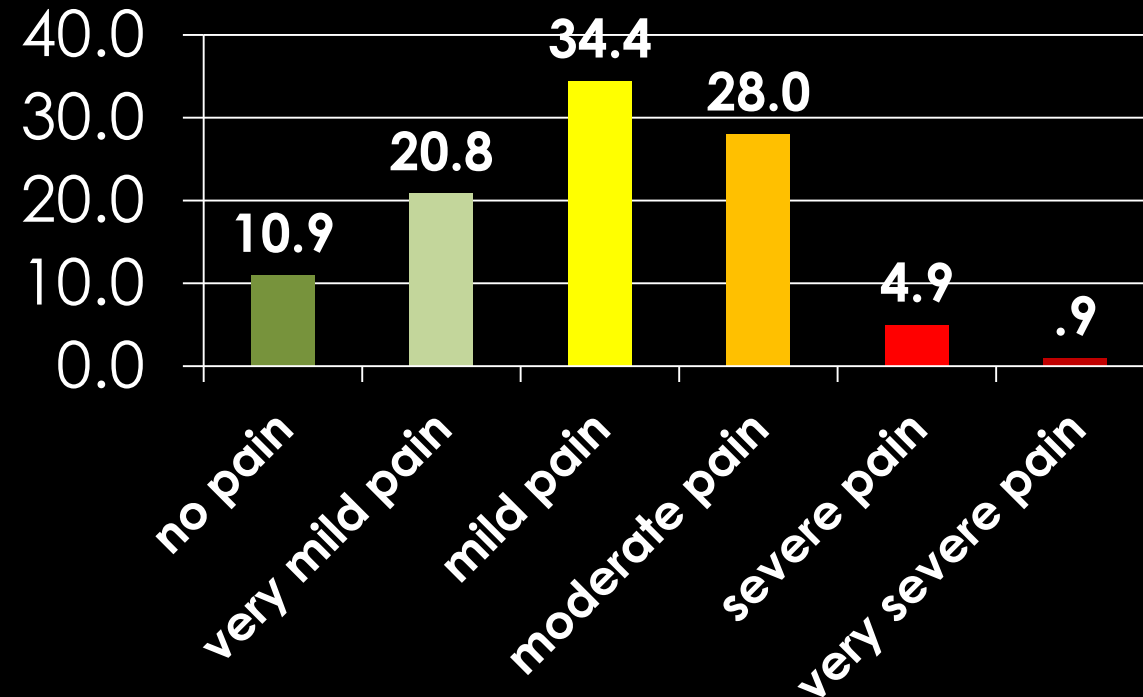

• Back pain	46.6%	• Severe tiredness	43.9%
• Stiff joints	39.8%	• Headaches	39.2%
• Allergies	33.8%	• Indigestion	24.2%
• Anxiety	20.7%	• Depression	18.1%
• Mouth problems	13.1%	• Constipation	12.2%
• Night sweats	16.5%	• Urine leakage	11.1%
		• Breathing problems	8.3%

**Av total symptom count 3.4 +/- 2.7 symptom groups  
per person**

How often  
experienced bodily  
pain in past 4  
weeks?

How much bodily  
pain in past 4  
weeks?

# COMPARED TO THE AUSTRALIAN POPULATION -

## ? Broadly similar ?

- Mental health diagnoses, eg diagnoses in previous 12 months :  
**23%** anxiety/ depression compared to  
**20%** any MH diagnosis in 2007 population
- Chronic diseases eg **17%** hypertension compared to  
**22%** age 18 yrs + with measured high BP in 2012
- Asthma rates higher - **15.0%** versus **10.2%**

## Shouldn't nurses look better than the general population?

- **50.6%** excellent/ very good health  
**55.1%** of Australian population

**Do we eat our veggies?** (5 portions pd)  
**YES 10.9%**  
**Australians: 8.3%**

**Do we eat 2 portions of fruit pd?**  
**YES 54.6%**  
**Australians: 48.3%**

**Tobacco smoke exposure:**

<b>At work:</b>	<b>11.5%</b>
<b>Own home:</b>	<b>6.6%</b>
<b>Others' homes:</b>	<b>5.5%</b>
<b>Public places:</b>	<b>0.2%</b>
<b>Outdoor areas:</b>	<b>25.4%</b>

<b>Any smoking</b>	<b>13.1%</b>
<b>Daily smoking</b>	<b>7.9%</b>
<b>Australians</b>	<b>16.3%</b>

**6% intend to quit within 6 mths.....**

**Drinking 5+ days per week: 10.8%**  
**'Risky drinking': 14.8%**  
**Australians: 19.5%**

**Average BMI 27.8 (+/- 6.2) kg/m<sup>2</sup>**  
(n=4503)

**Australians:  
35% overweight  
28.3% obese**

**obese  
27.0%**

**under/ normal  
weight 34.6%**

**overweight  
28.0%**

**medium  
risk 15.1%**

**'at risk'  
44.1%**

**high risk  
29.1%**

**Waist circumference  $(n=3,508)$ : 88.3%**  
**Australian women: 66.6% at increased risk**

**Within 6 months: 6.0%**  
**Within 12 months: 22.2%**

## NURSES WERE MORE LIKELY TO<sup>26</sup> INTEND TO LEAVE IF THEY -

- Were younger
- In a foundational role
- Worked in residential aged care, rehabilitation or disability
- Reported less job satisfaction
- Experienced workplace injury or abuse

### **Nurses were less likely to intend to leave if they –**

- Were family care providers
- Worked in inner regional areas

# THOSE WHO INTENDED TO LEAVE -

- Poorer general health
- More sick days
- More hospitalisations
- More often diagnosed with anxiety
- Experienced:  
more severe bodily pain,  
more symptoms of back pain, severe  
tiredness, indigestion, depression, breathing &  
sleeping problems

# TAKING EVERYTHING INTO ACCOUNT, NURSES LESS LIKELY TO INTEND TO LEAVE IF -

- **Older**: every 5 years of age reduced the odds of leaving by more than 7% (OR=0.924; 95% CI: 0.892, 0.957)
- Worked in **inner regional areas** (OR=0.76; 95% CI: 0.63, 0.91)
- Did not work **night shifts** (OR=0.76; 95% CI: 0.65, 0.90)
- Reported better **job satisfaction** (OR=2.64; 95% CI: 2.43, 2.86)
- and **better general health** (OR=0.92, 95% CI: 0.84, 0.99)

Those with breathing problems 34% more likely to intend to leave (OR=1.34; 95% CI: 1.03, 1.76)

## NEXT: CONSULTATION STAGE:

- Identify research, policy & practices which policy-makers and managers can initiate to safeguard the future capability of the workforce and optimise their capacity to deliver care.
